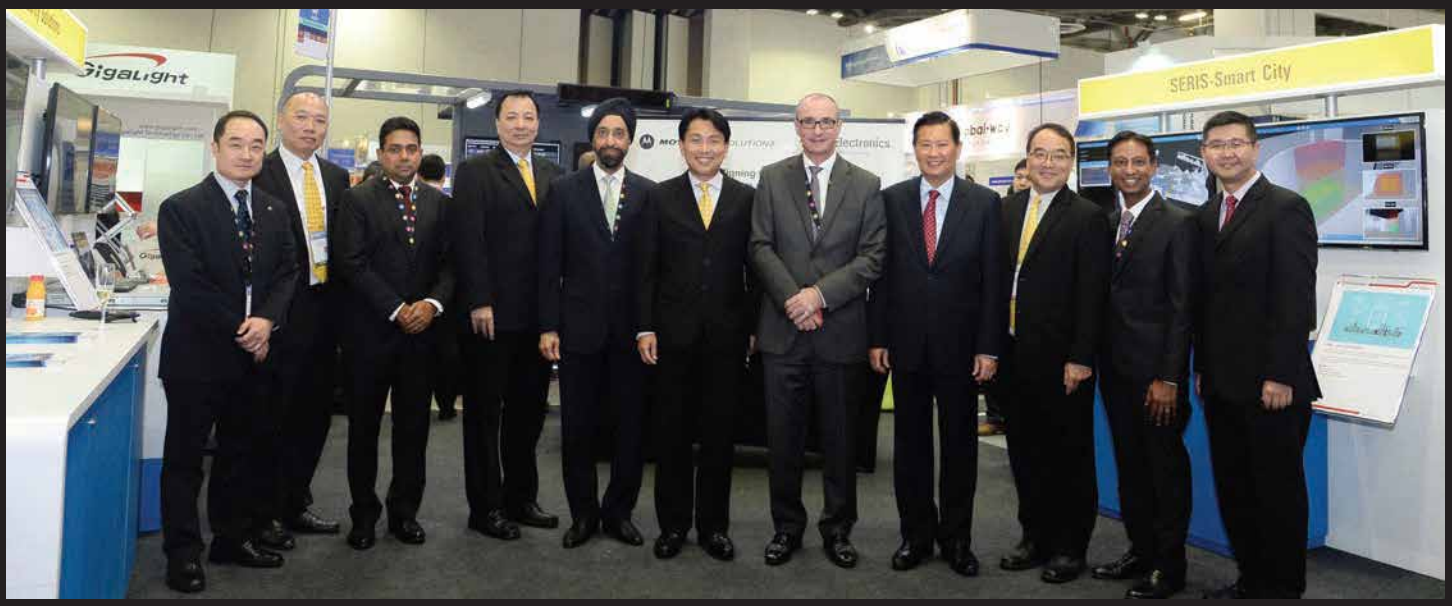
# Partnership Between ST Electronics and Motorola to Drive Advanced Technology Solutions



On the opening day of CommunicAsia 2016, ST Electronics and Motorola Solutions signed a Memorandum of Understanding to co-create innovative technologies for advanced secured communications in public safety, national security and enterprise sectors.

ST Electronics will bring to the partnership extensive experience in the design and implementation of large-scale, mission-critical solutions as well as cutting-edge cyber security expertise. Motorola Solutions has over 80 years of global experience and deep domain expertise in mobilising mission-critical intelligence for the public safety and enterprise markets.

The primary focus of the partnership is to help government and enterprise organisations reach new levels of security and productivity through smarter and more secure technologies. The collaboration will accelerate the development of specialised technologies for high security mission-critical broadband, cyber-security solutions and purpose-built applications, all of which will be made commercially available in each company's solution portfolio.

> "This partnership lays an important foundation for both organisations to capitalise on our joined strength to benefit our customers. With shared global expertise and business dynamism, this partnership will create new technological frontiers with innovative solutions for the government and private sectors in the realms of cyber security and public safety."
